

1.	a) Basic Data Pre-processing Programs involving pandas library. b) Programs for classification Build models using linear regression and apply it to classify a new instance.
2.	a) Basic Data Pre-processing Programs involving Numpy library. b) Programs for classification Build models using logistic regression and apply it to classify a new instance.
3.	a) Basic Data Pre-processing Programs involving Scipy library b) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Decision tree
4.	a) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) K nearest neighbour b) Demonstrate ensemble techniques like Bagging.
5.	a) Demonstration of Clustering algorithms using. i) Hierarchical algorithms b) Demonstrate ensemble techniques like Boosting
7.	a) Demonstrate ensemble techniques like Random Forest. b) Demonstration of Clustering algorithms using i) K-means
8.	a) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Naïve bayes b) Build a classifier, compare its performance with an ensemble technique like random Forest.

9.	a) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Support vector machine b) Evaluate various classification algorithms performance on a dataset using various Measures like True Positive rate, False positive rate, precision, recall.
10.	a) Basic Data Pre-processing Programs involving pandas library. b) Demonstrate ensemble techniques like Bagging
11.	a) Basic Data Pre-processing Programs involving Numpy library. b) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Support vector machine
13.	a) Basic Data Pre-processing Programs involving Scipy library. b) Programs for classification Build models using logistic regression and apply it to classify a new instance.
14.	a) Programs for classification Build models using linear regression and apply it to classify a new instance. b) Demonstration of Clustering algorithms using i) Hierarchical algorithms
15.	a) Programs for classification Build models using logistic regression and apply it to classify a new instance. b) Demonstration of Clustering algorithms using i) K-means
16.	a) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Decision tree. b) Evaluate various classification algorithms performance on a dataset using various Measures like True Positive rate, False positive rate, precision, recall

18.	a) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) K nearest neighbour b) Build a classifier, compare its performance with an ensemble technique like random Forest.
19.	a) Demonstrate ensemble techniques like Boosting. b) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) Naïve bayes
20.	a) Demonstrate ensemble techniques like Random Forest. b) Basic Data Pre-processing Programs involving Scipy library
21.	a) Basic Data Pre-processing Programs involving pandas library. b) Write a program to demonstrate the following classifiers. Use an appropriate data set for building the model. Apply the model to classify a new instance. i) K nearest neighbour
